#### Contents

| Heatmap                         |   | 3  |
|---------------------------------|---|----|
| Risk Indicators (RIs)           |   |    |
| Solvency                        | Tier 1 capital ratio  | 4  |
|                                 | Total capital ratio   | 5  |
|                                 | CET1 ratio  | 6  |
|                                 | CET1 ratio (fully loaded)   | 7  |
|                                 | Leverage ratio  | 8  |
| Credit Risk and Asset Quality   | Ratio of non-performing loans and advances (NPL ratio)                | 9  |
|                                 | Coverage ratio for non-performing loans and advances                  | 10 |
|                                 | Forbearance ratio for loans and advances                              | 11 |
|                                 | Ratio of non-performing exposures (NPE ratio)                         | 12 |
| Profitability                   | Return on equity  | 13 |
|                                 | Return on assets  | 14 |
|                                 | Cost to income ratio  | 15 |
|                                 | Net interest income to total net operating income                     | 16 |
|                                 | Net fee and commission income to total net operating income           | 17 |
|                                 | Net trading income to total net operating income                      | 18 |
|                                 | Net interest margin   | 19 |
|                                 | Cost of Risk  | 20 |
| Funding and Liquidity           | Loan-to-deposit ratio (for households and non-financial corporations) | 21 |
|                                 | Asset encumbrance ratio   | 22 |
|                                 | Liquidity coverage ratio  | 23 |
|                                 | Net stable funding ratio  | 24 |
| Annex 1: Statistical Annex      | Coverage EU banking sample  | 26 |
|                                 | Asset composition and volumes   | 27 |
|                                 | Loans: composition and asset quality                                  | 28 |
|                                 | Loans: NPL and coverage ratios  | 29 |
|                                 | Distribution of NFC loans and advances by NACE code                   | 30 |
|                                 | NPL ratios of NFC loans and advances by NACE code                     | 31 |
|                                 | Exposures to Real Estate activities and Construction                  | 32 |
|                                 | IFRS9 specific data   | 33 |
|                                 | Sovereign exposures   | 34 |
|                                 | Liability composition and volumes                                     | 35 |
|                                 | Liquidity   | 36 |
|                                 | Composition of own funds and risk-weighted assets                     | 37 |
|                                 | Profitability analysis: main drivers within RoE                       | 38 |

Note: Traffic lights provide the trend of the RI risk indicator given the historical time series. Data bar colour scale: green for the "best bucket", yellow for the intermediate and red for the "worst bucket". Further explanations on the calculation of the heatmap can be found in the "methodological note" in the Annex of this Risk Dashboard.

### Solvency

5th and 95th pct, interquartile range, and median.

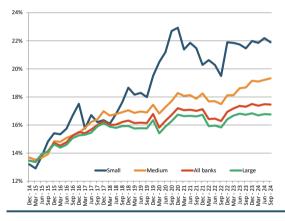

Weighted Averages by country.

140 130 120 110 100 Numerator: Tier 1 capital Denominator: Total risk exposure amount 90 Mar -Jun -Total numerator and denominator. Dec 2014 =100.

Numerator and denominator: trends

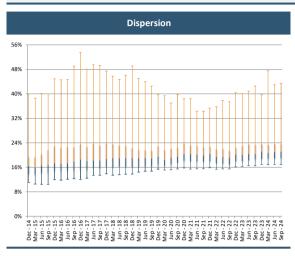

Weighted average. Banks are classified in the size class according to their average total assets between Dec. 2014 and Sep. 2024. Non-FINREP banks are assigned to the bucket of small banks

## Solvency

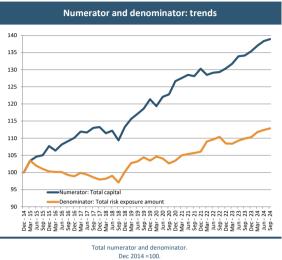

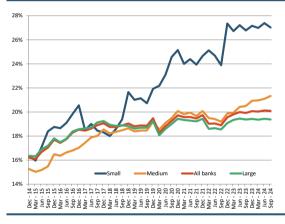

5th and 95th pct, interquartile range, and median.

Weighted Averages by country.

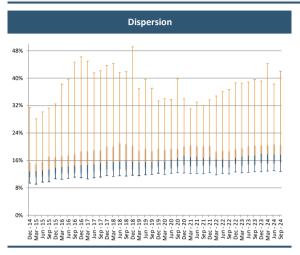

Weighted average. Banks are classified in the size class according to their average total assets between Dec. 2014 and Sep. 2024. Non-FINREP banks are assigned to the bucket of small banks.

#### Solvency

#### 3 - CET1 ratio

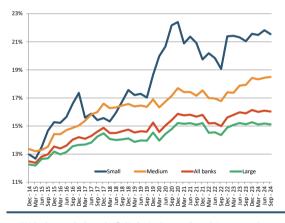

5th and 95th pct, interquartile range, and median.

Weighted Averages by country.

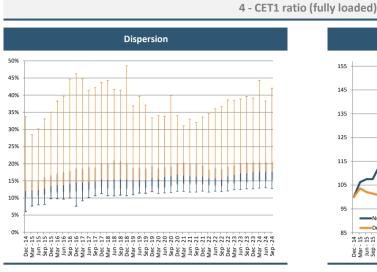

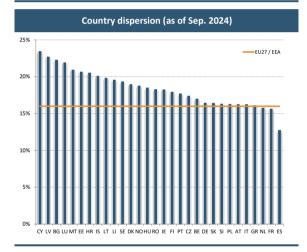

Weighted average. Banks are classified in the size class according to their average total assets between Dec. 2014 and Sep. 2024. Non-FINREP banks are assigned to the bucket of small banks.

(1) Institutions that are subsidiaries of a large institution with the Head Office in another EU/EEA country. They contribute to country aggregates but not to EU/EEA averages. For example, at country level the subsidiary in country X of a largest bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. (2) Individual institutions that do not belong to a banking group and report only on individual basis. These institutions are not required to submit FINREP data on solo basis to the EBA and therefore they are not included in FINREP-based risk indicators in this Risk Dashboard. (3) Institutions that are subsidiaries of an EU large institution. They contribute neither to country aggregates nor to EU/EEA averages because data for these institutions are included in the figures reported at consolidated basis by their parent

companies. (4) Number of branches of the largest institutions autorised in each country. The largest institutions have their Head Office in another EU/EEA country and they have the right to passport their activities. They do contribute neither to country aggregates no to EU/EEA average because data for these institutions are included in the figures reported a consolidated basis by their parent.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Loans: composition and asset quality

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank dominiciled in country is included both in data for countries X and Y (for the latter as part of the consolidated entity), in the EU aggregate, only the consolidated entity dominicity and splay minor variations between quarters, which might accordingly affect quartery changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead. (1) Gross carrying amounts, loans and advances at amortised cost (excluding at fair value through OCI and through P&L, excluding trading exposures).

Loans: NPL and coverage ratios

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead. (1) cross carrying amounts, other than trading exposures. (2) Gross carrying amounts, the and advances at amortised costs (excluding at fair value through OCI and through P&L, excluding trading exposures).

Non-trading loans and advances to non-financial corporations by sector

The data is based on gross carrying amounts, other than held for trading. Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is included both in data for country is on display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Non-trading loans and advances to non-financial corporations by sector

The data is based on gross carrying amounts, other than held for trading. Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is included both in data for country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Exposures to Real Estate activities and Construction - by country of counterparty

In compliance with the Recommendation ESRB/2016/14 on closing real estate data gaps, the EBA is disclosing aggregated information on the exposures towards non-financial corporations under Real Estate activities (NACE code L) and Construction Sector (NACE code F) <sup>[112]</sup>

(1) In discissing aggregated information on the real estate (RE) exposures towards the different national RE markets in the Union, the EBA made use of information in regulatory reporting templates that provide a breakdown of credit exposures. RE exposures are identified as those referred to as both the HACE codes 'P' and 'L', although strictly speaking some sub-categories would need to be excluded following the Commercial Real Estate (RE) editional adjust in the EBR Recommendation.

(2) Data is country aggregated on the basis of the residence of the immediate counterparty. The information on the geographical distribution of exposures by country is reported by institutions where non-domestic original exposures in all 'non-domestic' countries in all exposures classes are equal or higher than 10 % of total domestic and non-domestic original exposures. For this purpose exposures shall be deemed to be domestic where they are exposures to counterparties tocated in the Memee State where the institution is located.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries. X and Y for the latter as part of the consolidated entity), In the EU aggregate, only the consolidated entity domiciled in country X is considered. The sample of bank is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

(1) Applicable only to IFRS reporting banks. Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domicied in country Y is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country and display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Sovereign exposures

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is included both in data for country can display minor variations between quarters, which might accordingly affect quarter (hanges in abolite and relative figures. And Q (12020 nowards) LC banks are removed from the EU/EA aggregate and subdiations of US banks in EU movember at the same used instead.

Liability composition and volumes

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country Y is a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Composition of own funds and risk-weighted assets

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead. Other expenses include for instanced operations, impairment or (-) reversal of impairment on non-financial assets. These expenses are shown with a positive sign (like in the columns to the left). In case there are effects resulting in negative expenses (i.e. a positive income) they have a negative sign.

#### Methodological note

#### Risk Indicators' (RIs) heatmap

The heatmap provides a quick overview of the main RIs, in which it is possible to find the category, number and designation of the specific RI, its historic development and the three buckets in which each data point is assigned to across time (green for the "best" bucket, yellow for the intermediary one and red for the "worst" bucket). The "sample of reporting banks" returns the actual number of banks that submitted the expected data for that reference date (consolidated view).

For each of the RIs' quarterly data, the distribution across the three buckets is computed in respect of the sum of total assets for all banks that are included in the EBA's reporting sample in each reference date. From reference periods March 2020 onwards, the sum of total asses no longer includes UK banks.. Thus, if we observe any given bucket increasing its percentage, we immediately acknowledge that more assets are being assigned to that bucket. However, this does not necessarily mean that more banks are comprised within the bucket (the sum of total assets for all banks is fixed, as well as the total assets from each bank taken individually).

The traffic light of each RI can assume three colours (green, yellow and red) depending on the latest developments on the "worst" bucket of the RI comparing to the whole time series. If the "worst" bucket is progressing positively (i.e. in case fewer assets are being assigned to it), the traffic light should be moving away from red getting closer to green. The colour is computed considering the 33rd and the 67th percentile of the time series.

To help reading the heatmap, let us consider the example of the cost to income ratio:

|                      | < 50%       | 12.6%               | 12.2% | 12.5%               | 13.7%               | 14.5%               |  |
|----------------------|-------------|---------------------|-------|---------------------|---------------------|---------------------|--|
| Cost to income ratio | [50% - 60%] | <mark>2</mark> 5.0% | 12.0% | <mark>32</mark> .6% | <mark>34</mark> .0% | <mark>36</mark> .3% |  |
|                      | > 60%       | 62.5%               | 75.8% | 54.9%               | 52.3%               | 49.3%               |  |

The green traffic light for the ratio points to the good behaviour of this RI in the last quarter relating to past observations.

More than just declaring if the "worst" bucket has more or less percentage of assets assigned to it, this traffic light approach delivers simultaneously an insight to the latest developments in the RI's "worst" bucket and to the relative position of that data point comparing to all other observations in the same bucket.

The Risk Assessment (RA) meter summarizes the developments in all the KRIs included in the heatmap, providing a single measure. It is computed as the weighted average across the KRIs sum of total assets in the "intermediate" and "worst" bucket. The average is weighted in order to guarantee that each KRI category (solvency, credit risk and asset quality, earnings and balance sheet structure) receives the same weight. Since each category includes a different number of KRIs, the weight of each KRI is thus different. The risk perception increases with higher values of the RA meter: the closer to 100%, the higher the risk.
