Summary *

EU banks' capital ratios further increased in Q3 2015. The CET1 ratio was 13.0%, 10bps higher than in Q2 2015. The country dispersion remained wide, however there was no country with a CET1 ratio below 10%. The CET1 ratio was lower for large banks (12.6% in Q3 2015). However, investors are looking also at the total capital ratio structure.

The quality of banks' loan portfolios further improved in Q3 2015, but remains a concern. The ratio of non-performing loans (NPL) was 5.9%, 10bps below Q2 2015. The NPL ratio was lower for large banks (4.0%) and significantly higher for small institutions (21.7%). Also, with a range between 1% and 50% the country dispersion remained significant.

The **coverage ratio** for NPLs was unchanged at 43.6% in Q3 2015 (compared to the former quarter). Both numerator and denominator further decreased in the third quarter. The dispersion was wide among countries (between 30% and nearly 70%) and less significant among different size classes of banks (between 39% and 45%).

Profitability is still low. The average RoE - showing the common seasonal decline during the second half of the year - decreased to 6.4% in Q3 2015, 40bps below Q2 data. Small banks RoE was 6.4% in Q3 2015, whereas large banks RoE stood at 7.3%. In contrast, small banks' return on assets (RoA) was higher (0.58%) than large banks' RoA (0.42%) and the overall average (0.38%, 0.17% for medium-sized banks). The cost to income ratio stopped its decline in the third quarter, and increased again to 59.8% (59.2% in the former quarter). The dispersion among banks of different size classes has narrowed for this indicator.

The net interest margin (net interest income to interest bearing assets) remained stable at 1.6% in Q3 2015 compared to last quarter. It was still higher for small banks (1.9%) and hardly showed any dispersion among large and medium-sized banks (in a range between 1.5% to 1.6%). Net interest income increased its share in total operating income in Q3 2015 compared to the former quarter (56.3% vs. 54.8%), whereas the shares of net income from fees and commissions and of the net trading result in total operating income were nearly unchanged (26.3% in Q3 2015 vs. 26.1% in Q2 2015 and 6.0% vs. 6.1% respectively).

The loan-to-deposit ratio decreased to 123.3%. It was 1.6 percentage points below Q2 2015 and lower for small banks (105.2%). This emphasizes the importance of deposit funding for small banks. The ratio was higher for mid-sized institutions (141.6%). As in previous quarters, leverage was lower for small banks with a debt to equity ratio of about 10, vs. 13 for mid-sized banks and 16 for large banks. The ratio of liquid assets to short-term liabilities further increased (20.7%, compared to 19.7% in Q2 2015). The asset encumbrance ratio was 26.6% in Q3 2015 (25.7% in the former quarter) and showed a wide dispersion among countries (about 1% to nearly 50%). It is influenced by the funding mix (secured vs. unsecured funding, including deposits) as well as the level of central bank funding.

Overview of the main risks and vulnerabilities in the EU banking sector

	Le		Leve	vel of risk			
	Bank risk	Risk drivers	Last quarter Current quarter (memo)		nt quarter	Contributing factors/interactions	
			Level	Expected Trend	Level	Forward Trend	
	Credit risk	Asset quality, emerging markets, China, commodity markets		⇒		\Rightarrow	NPL ratios remain on elevated levels compared to their long-term history and geographical comparatives, although declining over the year. Further NPL sales and other measures for NPL resolution will be needed to improve asset quality. Credit risk remains heightened for some parts of the EU and for exposures in emerging market and commodities. An improvement in asset quality strongly depends on further economic recovery. However, economic prospects are fragil, owing e.g. to developments in China and other EM economies.
Pillar 1	Market risk	Risk from negative changes in market sentiment and market liquidity		•		•	Changes in market sentiment and market liquidity could lead to further price volatilities in all asset classes. Heightened volatility of asset valuations, interest and exchange rates is expected, also due to potential additional and diverging monetary policy actions around the globe.
Capital	Operational risk	Information & communication technologies, cyber attacks		\Rightarrow		\Rightarrow	Information and communication technologies remain a key operational risk. This includes cyber attacks, which are increasing in scope and sophistication. A further growing level of outsourcing and cost cutting measures adds to increasing operational risks.
	Concentration risk, IRRBB and other	Real estate markets, sovereign exposures, EM country exposures at some banks		\Rightarrow		\Rightarrow	The increase in real estate based lending and loans to small and mid-sized enterprises (SMEs) further aggravates the vulnerabilities in these loan exposures. Increasing real estate lending aggravates risk of price bubbles in some real estate markets. Also concentration in sovereign exposures as well as in the exposures towards certain countries (e.g. towards Brazil or China) remains high at some single names.
Pillar 2	Reputational and legal	Misconduct, litigation costs		₽		\Rightarrow	The scope of identified misconduct practices remains wide and misconduct costs high. Recent and further potential drivers for litigation risks are related to FX, investments in sovereign bonds and mis-selling of subordinated debt instruments to retail investors.
	Profitability	Interest margins, impact of deteriorating asset quality, conduct cost	-	\Rightarrow		\Rightarrow	Profitability remains weak, driven by further declining net interest margins not compensated by income from fees and commissions. Profitability is also negatively influenced by growing competition from shadow banking institutions and Fintechs. Banks' profitability suffers from low quality of assets in several jurisdictions and from conduct cost at several banks, too.
Liquidity & Funding	Access to funding and maturity distribution	Volatile spreads, need to issue BRRD / MREL compliant instruments		\Rightarrow		\Rightarrow	Amid volatile funding spreads, no major constraints could be observed for the issuance activity for secured and unsecured instruments. Recently, yields in the AT1 and T2 markets have widened significantly. There has been a bias towards short term maturities of senior unsecured instruments as banks are waiting for further clarifications around MREL before issuing long term instruments. This increases risks from maturity mismatches.
Liquidit	Funding structure	Reliance on secured funding		\Rightarrow		\Rightarrow	There has been less supply of senior unsecured than secured instruments recently, not at least due to lower yields on the latter. Uncertainties about TLAC and MREL are affecting issuance of subordinated debt instruments, and to a lesser extent senior unsecured bonds.
ent	Regulatory and legal environment	MREL, structural reforms		\Rightarrow		\Rightarrow	As before, it is expected that the impact of regulatory reforms, including those on harmonisation of risk weights, will be muted. On MREL further clarification will be needed in many countries before banks will be able to issue complying instruments. Structural refoms remain a key concern in some jurisdictions as they are the basis for NPL transactions.
Environment	Fragmentation	Funding, asset quality, profitability, supervision		\Rightarrow		\Rightarrow	Fragmentation among jurisdictions of asset quality, profitability and funding structure, and also supervision, remains high.
	Sovereign risk	Debt overhang		\Rightarrow		⇒	Risk of debt restructuring and challenges from a large debt overhang in some countries remain high. Significant sovereign exposure leads to elevated vulnerabilities of some banks.
Level		The level of risk summar	ises, in a	judgmen	tal fashi	on, the pro	bability of the materialisation of the risk factors and the likely impact on
Trend	High Medium Low		akes into	consider	ation the		of market and prudential indicators, National Supervisory Authorities' and
	Increasing Stable Decreasing

Mar - 15	16.44	11.39	14.11	19.91
Jun - 15	15.57	11.65	14.16	19.54
Sep - 15	15.42	11.36	13.94	18.74

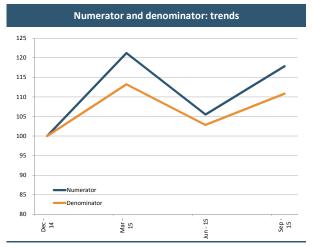

20 - Asset encumbrance ratio

5th and 95th not interquartile range and median

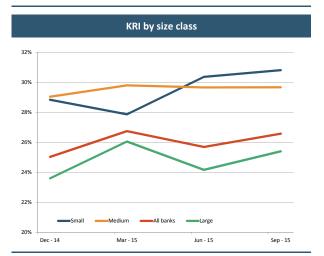

(*) Not reported. Weighted Averages by country.

Total numerator and denominator.

Dec 2014 =100.

Weighted average. Banks are classified in the size class according to the their average total assets between Dec. 2014 and Sep. 2015. Non-FINREP banks are assigned to the bucket of small banks.

Period	Weighted average	25th	50th	75th
Dec - 14	25.0%	11.9%	23.7%	36.8%
Mar - 15	26.7%	12.8%	24.7%	37.5%
Jun - 15	25.7%	13.1%	24.7%	35.2%
Sep - 15	26.6%	12.5%	24.5%	35.6%

^{*} The RoE is decomposed according to the formula: RoE = (NoP / Asset) * (Asset / Equity) * (EbT / NoP) * (NP / EbT). In case of a negative EbT, the ratio NP / EbT is computed according to the formula (1 - ((EbT - NP) / ABS (EbT))) to maintain the sign of the tax effect. Therefore, the RoE decomposition adjusts to the following: RoE = (NoP / Asset) * (Asset / Equity) * (EbT / NoP) * (1+ (1-(NP / EbT))).

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

Methodological note on the Risk Indicators' (RIs) heatmap

The heatmap provides a quick overview of the main RIs, in which it is possible to find the category, number and designation of the specific RI, its historic development and the three buckets in which each data point is assigned to across time (green for the "best" bucket, yellow for the intermediary one and red for the "worst" bucket). The "sample of reporting banks" returns the actual number of banks that submitted the expected data for that reference date (consolidated view).

For each of the RIs' quarterly data, the distribution across the three buckets is computed in respect of the sum of total assets from all banks. Thus, if we observe any given bucket increasing its percentage, we immediately acknowledge that more assets are being assigned to that bucket. However, this does not necessarily mean that more banks are comprised within the bucket (the sum of total assets for all banks is fixed, as well as the total assets from each bank taken individually).

The traffic light of each RI can assume three colours (green, yellow and red) depending on the latest developments on the "worst" bucket of the RI comparing to the whole time series. If the "worst" bucket is progressing positively (i.e. in case fewer assets are being assigned to it), the traffic light should be moving away from red getting closer to green. The colour is computed considering the 33rd and the 67th percentile of the time series.

To help reading the heatmap, let us consider the example of the cost to income ratio:

The green traffic light for the ratio points to the good behaviour of this RI in the last quarter relating to past observations.

More than just declaring if the "worst" bucket has more or less percentage of assets assigned to it, this traffic light approach delivers simultaneously an insight to the latest developments in the RI's "worst" bucket and to the relative position of that data point comparing to all other observations in the same bucket.
